No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Isolation, changes during ripening in normal and mutant tomato fruit, and characterization of a related cDNA clone.";
Plant Physiol. 108:1099-1107(1995).
-!- FUNCTION: Involved in cell wall degradation. Degrades polysaccharides containing beta-(1--4)-linked galactans, acting as an exo-(1--4)-beta-D-galactanase.
-!- CATALYTIC ACTIVITY: Hydrolysis of terminal, non-reducing beta-D-galactose residues in beta-D-galactoses.
-!- MISCELLANEOUS: Has a pH optimum of 4.5.
-!- SIMILARITY: BELONGS TO FAMILY 35 OF GLYCOSYL HYDROLASES.
-!- SIMILARITY: Contains 1 SUEL-type lectin domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SEQUENCE FROM N.A., AND PARTIAL SEQUENCE.

         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
